India's transport ecosystem has always been seen as one of India's most challenging sectors. From battling infrastructure to progress, this sector has always been on top of the list of concerns policymakers have had. However, with the advent of technology and industrialization, there has been a dramatic change and the transport ecosystem has changed enormously. The Indian Metro Rail is a classic example. The product of DMRC has not just opened avenues for employment and infrastructure but also provided convenience to millions.

Much has changed and a lot is still to change. It is now time to trace the road of transportation advancement with the backing of technology.
